10. Other:			

Continuation of 2. NOTE: The proposed amendment to claim 33 introduces a new limitation of "greater than 50 parts", which raises a new issue that would require further consideration.

Continuation of 5. does NOT place the application in condition for allowance because: The final rejection of 8/11/04 still stands over the cited prior art. Applicants contend that Nagata differs from the presently claimed invention in that the reference does not teach or suggest a melt-mixed blend or that the thermoplastic resin interact ionically or covalently with a high water absorbent resin. As pointed out in the final rejection, Nagata teaches a polymer blend composition being formed by stirring and mixing a high water absorbent resin and a thermoplastic resin, and then fusing the resins together by raising the temperature of the mixture near the melting point of the thermoplastic resin. Thus, the polymer blend composition of Nagata would be melt-mixed. Furthermore, since Nagata teaches the same resins as the presently claimed invention, Nagata's resins would inherently react with each other the same way as presently claimed. Thus, Nagata does teach the presently claimed invention.
